About this course

The NEBOSH Construction Certificate, officially the NEBOSH Health and Safety Management for Construction (UK), is a leading construction health and safety qualification that teaches learners how to manage risks on construction projects. This NEBOSH construction course focuses on practical construction risk management, CDM duties and recognised industry standards and good practice.

This construction health and safety training helps organisations to:

- Improve site safety performance and reduce construction-related incidents, delays and costs
- Understand how their construction activities, methods and contractors affect health and safety risk
- Strengthen compliance with CDM 2015 and other construction health and safety legislation
- Develop and maintain robust construction phase plans, risk assessments and site management systems that support tenders and client audits

The NEBOSH Health and Safety Management for Construction is assessed through a single open book construction exam based on a realistic project scenario that tests your ability to manage site risks in practice.

Studying by eLearning

- Fully online, self-paced NEBOSH Construction Certificate course with flexible study
- Study anytime, anywhere with tutor email support when you need it
- CN1 open book exam booked and paid for separately from the course fee
- Unlimited course access and online learner resource folder to support revision

Who is the course for?

The NEBOSH Construction Certificate is designed for those working in construction, civil engineering, utilities, property management, broadcasting, and other related sectors.

It's ideal for managers, supervisors, CDM Coordinators, and anyone looking to start or progress their career in the construction industry with a recognised health and safety qualification.

What you will learn

When you enrol on the NEBOSH Construction Certificate, you'll gain access to everything you need to succeed:

- 12 elements of content covering the full NEBOSH Construction syllabus
- Email-based tutor support throughout your learning
- Mock assessments to help you prepare for your final exam

- Unlimited access until you pass - study at your own pace, with no pressure
- NEBOSH Construction Course Structure and Syllabus

The NEBOSH Construction Certificate is made up of one core unit:

Unit CN1 - Managing and Controlling Hazards in Construction Activities, which is assessed separately.

This unit is divided into 12 key elements:

- Construction law and management
- Construction site hazards and controls
- Movement of people and vehicles
- Manual and mechanical handling
- Work equipment - hazards and controls
- Electrical hazards and controls
- Fire hazards and controls
- Chemical and biological health hazards
- Physical and psychological health hazards
- Working at height - hazards and control
- Excavation work and confined spaces - hazards and control
- Demolition work - hazards and control

How the course is assessed

Unit CN1 Assessment - NEBOSH Construction Certificate

The assessment for Unit CN1 is designed to test your ability to apply the knowledge and understanding gained during your studies of the NEBOSH Construction Certificate syllabus.

You will complete an Open Book Examination (OBE) based on a fictional construction site scenario. The assessment must be completed and submitted within 48 hours, although you are not required to complete it all in one sitting.

Your completed assignment will be internally assessed by NEBOSH.

Please note, it is your responsibility to submit the assessment within the specified timeframe. Any work not returned by the deadline will result in a fail for this part of the qualification.

Entry requirements

There are no formal entry requirements for the NEBOSH Construction Certificate. However, learners should have a suitable standard of English to understand the course content and complete the assessments effectively.

NEBOSH recommends an English proficiency equivalent to an IELTS score of 6.0 or higher.

What you will get from the course

The NEBOSH Construction Certificate provides learners with essential knowledge and practical understanding of managing health and safety in construction settings. Key areas covered include:

- Legal Requirements for Construction Health and Safety
- The main legal duties under the Health and Safety at Work Act
- Key responsibilities outlined in the Construction (Design and Management) Regulations 2015 (CDM)
- Roles and Responsibilities Under CDM 2015

Understand the duties of:

- Clients
- Designers
- Principal Designers

- Principal Contractors
- Contractors
- Health and Safety Management Systems
- The importance of having an effective health and safety management system
- The key elements that contribute to a strong safety culture on construction sites
- Controlling Construction Hazards

Learn methods to identify and control common construction site hazards, including:

- Working at height
- Manual handling
- Machinery and equipment safety
- Electrical hazards
- Site transport and more
